# plotDipoleMagnet

Plot dipole magnet which approximate a spherical magnet in its far field.

## Syntax

```
plotDipoleMagnet()
```

## Description

plotDipoleMagnet() load dipole constants from config.mat and construct magnet in its rest position in x and z layer for y = 0.

## Examples

```
plotDipoleMagnet();
```

## Input Arguments

**None**

## Output Arguments

**None**

## Requirements

- Other m-files: generateDipoleRotationMoments.m, computeDipoleH0Norm.m, computeDipoleHField
- Subfunctions: none
- MAT-files required: data/config.mat

## See Also

- quiver
- imagesc
- streamslice

```
